

## ALUPROFF CHILD SAFETY

Child safety is a top priority for us, as it is extremely important that our products can be used safely in homes with young children.

Our anti-ligature accessories comply with the European standard EN 13120, which requires indoor window treatments, installed in premises where children from 0 to 42 months are present, to be provided and mounted with anti-ligature devices. We are constantly developing new products, to help minimize the risk of accidents, and have already several patented products in our portfolio.

#### 1522:

This design toggle is thoroughly tested, and gives both an easy way to hook in the product into a tunnel tape loop, and a very efficient and fast adjustment of your roman blind. The patented toggle has a high value to you as a producer of the blind as well as to the fitter when adjustments are to be made on site.

Furthermore the end user has a tested and approved child safety product in the blind that meets the market demands and regulations, not to forget safety to the young ones. All these benefits are now met by the toggle 1522 with hook.

#### 3909:

Wall mounted to make cord/chain hang tight along the wall, making it impossible for children to get the cord/chain around the neck. In addition, you avoid the cord or chain winding vertically.

#### 3021:

This article is a chain break-away. It is triggered by a pull of 6 kg, and will therefore "break" if a child wraps the chain around the neck while falling e.g. down from the window sill.

#### 1454:

Two cleats must be securely attached to the wall, at least 10 cm from each other and at least 150 cm above the floor. The cord is then wrapped around the cleats. See instruction.

#### 3215:

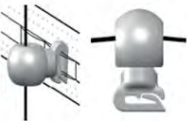

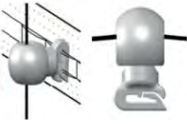

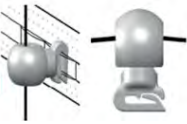

Cord connector with break-away effect at about 1 kg. During pull in the cord connector, all the cords remains (up to 6 cords at a time) in the cord connector. Should a child get its head entangled between the cords, the cord connector easily breaks in half, and the child thus avoids strangulation. The two halves can be assembled again for further use.

#### 1518:

Adjustable cord lock with cord-slip-away effect at 2 kg. You know this device from bags, hoodies and anoraks. You can lightly press the button, to create space for the cord, to be adjusted up and down. When you release the button, the spring creates tension on the cord, thereby locking it. The cord lock is tested to not being able to lock more than 3 kg load, and therefore can be used beneficially as a safety device on Roman blinds, where many cords are to be adjusted and fastened on the back side of the curtain.
